Conformity Europe (CE)

Van Raam Reha Bikes B.V., as manufacturer, declares that the Fun2Go / FunTrain, as described in this user manual, is manufactured in accordance with Regulation (EU) 2017/745, risk class 1. The Fun2Go / FunTrain supplied with the Silent electrical system also complies with Directive 2006/42/EC including the applicable parts of EMC Directive 2014/30/EU and the NEN-EN 15194:2017 Bicycles - Electric supporting bicycles - EPAC Bicycles - part 4.2 Electrical requirements. The signed declaration of conformity can be found on the Van Raam website.

Conformity UK (UKCA)

Van Raam Reha Bikes B.V. as manufacturer declares that the Fun2Go / FunTrain, as described in this user manual, is manufactured in accordance with the "Essential Requirements of Medical Devices Regulation 2002" (UK MDR 2002 Class 1 Medical Devices). The Fun2Go / FunTrain supplied with the Silent electrical system also complies with the "Machinery (Safety) Directive SI 2008/1597" including the applicable parts of "Electro Magnetic Compatibility Regulations SI 2016/1091" and the NEN-EN 15194:2017 Bicycles - Electric support bicycles - EPAC Bicycles - part 4.2 Electrical requirements. The Fun2Go / FunTrain is provided with UKCA label according to "EU Exit Regulations 2020/1478". The signed declaration of conformity can be found on the Van Raam website.
Introduction

This user manual provides important and necessary information about the use of your tricycle. We ask you to read this manual thoroughly before using the tricycle. Always follow the instructions as provided in this user manual and keep the manual carefully. The most current version of the user manual can be found on the product page of the bicycle on the website www.vanraam.com.

Delivery

The delivery should include the following:

- Tricycle with packaging
- User manual(s)
- Possible Smart-battery including card with 5-digit code (depending on options)
- Possible chargers (depending on options)
- (Spare) keys

Check the delivery immediately after receiving it. In case of damage or incomplete delivery we ask you to contact your dealer immediately. Upon delivery you should fill out the form “Form service, maintenance, modifications an warranty claims” in the back of this manual.
**Indication**

The Fun2Go and FunTrain are meant to ride together with people who are no longer able to independently participate in traffic. One attendant rides with several people with disabilities.

**Intended usage**

The tricycle has been designed for normal use on a flat, solid surface. In general, tricycle caution should always be observed when using the tricycle. Moreover, the safety instructions as described in this manual should be explicitly followed. Local traffic laws and regulations should also be observed.

The tricycle is meant for two persons, coupled to the FunTrain it is meant for four persons. The driver should be independently mobile and may not have any serious visual or other impairment, which prevent responsible participation in traffic. The maximum user weight and basket load (to be found in the chapter ‘Technical Specifications’) may not be exceeded.

The manufacturer is not responsible for any damage or injury caused as a result of or during the course of any other type of use.
Safety measures

- If children or people with limited mental perception join the bike ride, there should always be a responsible supervising person as the main driver of the bike. This main driver is always responsible for the safe use of the bike.
- Ensure the tricycle is in good condition each time before using it. Check before each ride that the brakes are in order. Check the lighting and make sure there is enough tyre pressure.
- Regularly check if the wheels, the handlebars and the saddle are properly fixed and also whether all screw joints are tight.
- Only use the tricycle on a solid and level surface.
- It is not recommended to cycle on a slope steeper than 10%, this carries an increased risk.
- It is advised to drive slowly on slopes, especially when riding backwards. When braking while riding backwards, it is advised to use a dosed braking force. When doing so, avoid the bike losing contact with the road.
- In the case you stand still on a slope or ramp, proceed to drive off slowly. While driving off you can lean forwards to prevent the front wheel being lifted.
- Avoid riding on steep slopes when your bike is fitted with one of the following accessories on the rear of the bike: Walking Holder bracket, wheelchair holder, child seats, or loaded baskets. In these cases the front wheel of your bike may lose contact with the road more easily.
- Make sure that wide trousers or lose hanging clothing don’t get caught in the chain, spokes or pedals.
- Do not use a pressure washer or a steam cleaner for the cleaning of the tricycle.
- Block the tricycle to stop it from moving when you are getting on or off the tricycle. Do this by using the parking brake and holding the tricycle.
- Always lock the tricycle when leaving it unattended.
- Make sure that you do not reach a dangerous speed when driving downhill and entering tunnels. Brake in time and bike at a moderate speed.
- In case of pregnancy, extra care is required owing to a higher risk of injury.
- Do not leave the tricycle in direct sunlight: the temperature of some parts could exceed 41°C resulting in possible burns to the skin.
- If your tricycle is equipped with the Silent electric motor system, make sure that you get used to riding with the electric support engaged. Be careful when you
turn on the electric support system and make sure you don’t get startled by unexpected behaviour because you turned on the electric support.

- Practice the reverse function! Please be careful not to switch on the reverse function of the electric motor inadvertently.
- For safety reasons, the Fun2Go with pedal assistance is limited to a maximum of 20 km per hour.

**Extra attention** is essential if a child is using the tricycle!

- **Never** leave a child alone with the tricycle without supervision!
- **Always** have the child wear a tricycle helmet! Make sure the helmet fits correctly!

**Load**

The maximum load should not be exceeded. See the information in the technical data table in the ‘**Technical Specifications**’ section of the user manual. By permitted load we mean the total load, including the load on the luggage rack and in the basket.

Make sure that the permitted basket weight is not exceeded. (maximum 20 kg). People may not be transported in the basket!

**Damaged or worn out parts**

The replacement and repair of parts (frame, forks, light, brakes, drive mechanism and the handlebars) should **always** be performed by an authorised dealer. If not, the guarantee ceases to be valid and you will be personally responsible in the event of possible damage.

**Specific safety parts should always be replaced by new parts!**
Adjustment of the tricycle

Before using the tricycle, adjust it to the measurements of the two cyclists. This is of great importance, especially the seats and the handlebars.

*If an optimal adjustment of the tricycle, as defined in the instructions, is not possible, you can contact your dealer for a fitting solution.*

The brakes are correctly adjusted and should only be adjusted by the dealer during periodic maintenance.

**Take care that fingers and limbs do not get trapped while adjusting the tricycle.**

**Seat position**

The seat position is correctly adjusted when the cyclist is sitting on the tricycle and puts a foot on the pedal in the furthest position. Adjust the seat in such a way that the leg is stretched but still relaxed.

To adjust the seat:

1. Pull the handle up.
2. Move the seat to the correct position and release the handle.
Handlebars height

The height of the handlebars affects the comfort of the ride. It determines the pressure on the hands and the position of the back. You decide the most comfortable position yourself with some practice.

To adjust the handlebars:

1. Slightly loosen the screw by using an Allen key.
2. Slide the handlebars to the correct height and tighten the screw very firmly again.

Do not pull out the handlebars further than the mark. Otherwise the tube will not be deep enough in the shaft and will risk breaking off, which can lead to serious injuries.

Position handlebars

You can tilt the handlebars. This influences the distance from the handlebars to the upper body. Determine your own most comfortable position by using the bike.

To tilt the handlebars:

1. Slightly loosen the screws [A] and [B] with an Allen key.
2. Put the handlebars in the desired position and then tighten the screws considerably.
3. Slightly loosen screw [C] with an Allen key, put the handlebars in the correct (horizontal) position and then tighten the screw again.
Before the first use

Parking brake (Fun2Go)
Always use the parking brake if you park the tricycle and leave it behind.

! Block the tricycle with the hydro brake when passengers are getting on and off.

To operate the parking brake, squeeze the left brake [A] and secure the brake with the lever [B].

! Always try to park the tricycle on a level surface. The tricycle may never be parked on a slope bigger than 6 degrees.

Parking brake (FunTrain)
Always use the parking brake on the caster wheel if you park the tricycle and leave it.
Lighting

Normally, the lighting on your bike can be operated manually and set to different modes. However, if your bike is equipped with the Silent Elektro system, your lighting will automatically turn off when the electric system is activated. The controls of both the manually operated and centrally operated lighting is explained below.

Manually operated headlight

The headlight has a button with three different modes: ON – ON [50%] – OFF

Adjust the angle of the headlight to its correct position, when the centre of the light beam is about 10 metres in front of the bicycle.

The headlight is powered by batteries. When the batteries are nearly empty, the LED light in the button of the headlight will turn red. Follow the steps to change the batteries of the headlight.

1. Open the headlight by pushing down the tab on the housing and simultaneously pulling the front of the light outward like shown.
2. Change the two alkaline batteries (2x AA).
3. Put the light back together by first pushing the top of the light back into the housing and then pushing the bottom of the light back over the tab of the housing.

You can only operate the light while your bike is standing still to avoid dangerous situations and to avoid the chance of entrapment.
Manually operated rear light
The rear light has three options which you can choose by pressing the button repeatedly: On-Auto-Off.

The setting is as follows:

*Press 1x: light is on*
*Press 2x: lighting is automatic*
*Press 3x: light is off*

With the “On” or “Off” mode, the rear light can be manually switched on and off.

With the “Automatic” mode the rear light automatically turns on and off with the help of light and movement sensors. When the tricycle stands still for a while, the light will automatically turn off.

The rear light works on batteries. When the batteries are almost empty, a red LED light on the top starts flashing. To replace the batteries, follow the next steps.

1. Dismantle the cover of the holder by pressing in the lip at the bottom of the light.

2. Replace the alkaline batteries (1,5 V - 1500 mA) and assemble the cover.

*Batteries cause environmental pollution.*
*Follow the local regulations during disposal.*
**Centrally Operated Lighting**

The bike has been equipped with centrally operated lighting, with the lighting being connected to the electric system.

The lighting will turn on automatically when the electric system is activated.

Adjust the angle of the headlight, so that the centre of the light beam is aimed about ten metres in front of the bike.

You can manually turn the lighting on and off by briefly pushing the on/off button on the display. When the electric system is turned off, the lighting will turn off automatically.

*Make sure there is always a battery on the bike when you are cycling after dark!*

Once the battery is nearly empty, the motor will no longer provide pedal support power assistance while cycling. The lighting will still be powered by leftover power.

*The USB port in the headlight has no function.*

**Gears**

Standard the tricycle has eight gears. The gears are used by turning the grip. **Do not use the pedals** when turning the grip.
Couple the FunTrain

1. Lift the handle of the trailer coupler and place the trailer coupler over the towing ball.

   Please verify that the safety cable is positioned around the towing ball.

2. Hook the safety cable underneath the bracket [A] as pictured.
3. The trailer coupler is fitted right when the indication indicated the “+” sign.
4. Ensure the support wheel is folded after connecting. Unlock the locking bolt by pulling it out.
5. Move the support wheel to the folded position until you hear a ‘click’ when the locking bolt locks itself again.

Uncouple the FunTrain

1. Unfold the support wheel. Unlock the locking bolt by pulling it out.
2. Move the support wheel to the unfolded position until you hear a ‘click’ when the locking bolt locks itself again.
3. Loosen the safety cable from the bracket [A].
4. Lift the handle of the trailer coupler and lift the trailer coupler from the towing ball.

   Beware that the safety cable comes off the towing ball together with the trailer coupler.
Check before every ride:

- The brakes (including the parking brakes)
- The tyre pressure (recommended: 3 bar)
- The lights
- That all parts are fitted properly
- That the battery is adequately charged (depends on options)

Contact your dealer and stop using your tricycle as soon as you observe irregularities during the check! As with all mechanical parts, the tricycle is subject to wear tear and high loading. If a component fails, it can lead to very dangerous situations. This can lead to damage or injuries to the user of the tricycle. Any form of cracks, scratching or change in colour in heavily loaded parts or a component indicates that the component must be replaced.

The tricycle gives a very different ride experience than a bicycle.

If there is an electric motor on a bike: you must train with the acceleration function and reverse functions. Be careful that the acceleration mode or reverse mode are not unintentionally started while using the bike. For example, at traffic lights the reverse function can accidentally be activated and the tricycle reverses.

High speeds in the bends, driving on rough ground, and sharp bends can lead to the tricycle falling over!

Important safety points for the cyclist

- Be very careful during the first ride.
- When riding the tricycle hold both hands firmly on the handlebars and feet on the pedals.
- Test the riding style of the tricycle on rough ground at moderate speed. This way the cyclist learns how to react to unexpected movements of the tricycle and the handlebars during use.
- Small obstacles should be cycled over with appropriate speed.
- Obstacles higher than five centimetres should be avoided.
- Ensure that no dangerous speed develops while driving downhill and entering tunnels. Brake on time and cycle at a moderate speed.
**Electro system Silent**

The Silent Electric motor system is a special developed support system by Van Raam for the rehabilitation market. The system is characterized by:

1. A simplicity of operation
2. Individually adjustable support for cycling
3. Modern and efficient electronics
4. The powerful electric motors
5. High quality and safe batteries
6. Highly reliable system

The Silent system comes standard with a basic support mode individually programmed for your bike. In most cases, it gives precise and smooth cycling characteristics with a good compromise between support and radius of action. In special cases, an individually tailor-made cycling program is necessary. You can obtain information from the dealer about the possibilities of a customised cycling program.

**Functions:**
The electric system has the following functions:

- Pedal support while cycling
- Start support
- Backwards pedalling with support
- Intergrated lighting contol

1. **On/off button**
Using the on/off button, the electrical system can be switched on or off.

- Switching on: Push the button briefly.
- Switching off: Push the button for two seconds.

After the system is turned on, the electric motor is active in level 1.
When the system is not used, it will automatically turn off after a certain time.

Always turn off the electric system before getting on and off the bike, and when you are walking while holding the bike.

2. Degree of support 1, 2 and 3
The desired support can be set by using one of the support levels 1, 2 or 3.

1. Light support, maximum range.
2. Average support, average range.
3. Maximum support, low range.

You can change the level while cycling.

The behaviour of the battery depends on a lot of different factors and is strongly influenced by: capacity and voltage of the battery, degree of support that is used, temperature, wind speed, tyre pressure, cycling speed, weight of the user and the luggage, use of gearing etcetera.

3. Start assist
The Silent electric motor has a start support. This allows the driver to pull-away without pedalling up to a speed of 6 km/h over five seconds. To accelerate, press the start assist button and keep it pressed down. The function will only activate again, when the support button has been pressed down again.

If you peddle normally, the function works for up to five seconds, each time the button is pressed, up to maximum speed of the bicycle (20 km/h).

The start assist is used for:

- Extra support when starting.
- Extra support for cycling uphill.

When cycling a steep climb, you can use support in level 3 and push the start assist repeatedly for six seconds to achieve maximum support.
4. Indication lights

The level of charge in the battery is given by five LED lights: four of these are green, the one on the left can show either green or red, if charge is low.

- 🟢🟢🟢🟢🟢 The battery is fully charged. When in use, the number of green LED lights on the battery will decrease.
- 🟢🟢🟢🟢🟢 The battery is 50% charged when two green LED lights are on.
- 🔴🟢🟢🟢🟢 The battery is almost empty if only the last red LED light is on. The battery needs to be recharged or replaced by a (new) fully charged battery.
- 🔴🔴🔴🔴🔴 When the last red LED light flashes, the battery is empty and the motor will no longer support while cycling. The integrated lighting continues to work.

The battery is equipped with a button and indicator that makes it possible to check the charge by briefly pressing the button [A]. The status of the battery is shown with five green indicator LEDs, of which the left most one can blink. That means the battery is nearly empty. During charging, the battery displays the progress of the charging.

Reverse mode

The reverse mode is activated by pedalling backwards from a standing position. Within a few seconds the motor is activated and the tricycle cycles at a speed of about 2 km/h backwards (when you start to pedal backwards).

Do not be startled by an unexpected reaction from the electrical system. If you e.g. wait for the traffic light and you play with the pedals by moving them backwards the reverse mode is activated and the tricycle cycles backwards.
Centrally Operated Lighting
The bike is equipped with centrally operated lighting, with the lighting automatically turning on when the electric system is activated. Further instructions can be found in the chapter 'Before the first use'.

Other functions
The smart display has an automatic dimming function. With an inbuilt light sensor the lights of the display will automatically creating less distraction for the cyclist in darker or more shadowy conditions.

Charging the Battery
For the best performance and to prolong the life of the battery, we recommend that you charge the battery at home at room temperature.

To charge the battery:

1. Unlock the battery by turning the key a quarter.
2. Push down and hold the lock. Then pull the battery out of the holder with your other hand.
3. Take the battery pack inside. **First** plug the charger into the socket. The green LED will light up. The charger is now standby.
4. **Then** insert the connector of the charger into the charging point of the battery. The red LED will light up. The charger is now charging.

   **Please note!** If the battery is not connected properly, the green LED will light up (standby mode). If the connection is poor, unplug the plug from the socket and clean the charger's connector with a dry cloth.

5. The charging time depends on the level of the battery. The charging time is approximately 2 hours with a 11,4 Ah/36 V battery and approximately 4.5 hours with a 24,8 Ah/36 V battery.

6. Once the battery is fully charged, the green LED will be solid. Now **first** remove the charging connector of the charger from the connector of the battery.

7. **Then** unplug the charger from the socket.

8. Put the battery back in the holder of the cycle and close the lock.

If necessary, the battery can also be charged directly on the cycle.

**Charger:**

<table>
<thead>
<tr>
<th>LED indication</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>Green</td>
<td>Standby / battery full</td>
</tr>
<tr>
<td>Red</td>
<td>Charging</td>
</tr>
<tr>
<td>Red, blinking</td>
<td>Safety: Polarity inversion; Short; Over temperature; Over power; Over voltage</td>
</tr>
</tbody>
</table>

It is better for the battery if it is charged regularly, rather than wait until it is completely drained. Never leave the bike with a drained battery!

Ensure that the battery is always pushed straight into the holder.
**Backup battery (optional)**
The bike can be supplied with a second battery. When the first connected battery is empty, switch over to the second battery.

One of the battery holders is connected to the system, you can recognize this one because of the cables.

**Switchable battery pack (optional)**
The tricycle may be fitted with a switchable battery pack. Once the connected battery is empty, you can swap the battery using a switch. This switch is located either under the seat, below the luggage rack or below one of the two batteries.

Both of the battery holders are connected to the system. If desired, you can leave the second battery to charge when you are using the other.

**Battery Deep Sleep Mode**
When the battery is nearly empty and has not been used for a week, the battery will enter deep sleep mode. In this mode the battery uses as little power as possible, to increase the lifespan of the battery.

When the battery is in deep sleep mode, it cannot be used. By pressing the button on the battery, the battery will be woken up from deep sleep mode, and it can be used again. It is recommended to first charge the battery before using it in that scenario.
Charging and maintenance tips for the battery

- Never leave the bike with an empty battery! We advise you charge the battery as soon as possible before it’s totally empty.
- The best storage-charge of the battery is when three to five LED lights are lit.
- Check the battery every month in the winter. If fewer than three LED lights burn, recharge the battery.
- Preferably store and use the battery in environments of 5 to 20°C. Avoid higher or lower temperatures.
- Do not charge the battery in sunlight and make sure that the battery is not charged at a temperature of less than 5 ºC.
- Only use the charger indoors and in non-humid environments, the charger should not get wet.
- Only use the Van Raam supplied battery.
- Only charge the battery with the supplied charger!
- The battery housing and charger housing may never be opened! When there is a problem, contact your dealer.
- The Van Raam battery may not be revised due to serious safety risks and the incorrect functioning of the electric system as a whole.
- Don’t drop the battery, this can cause external and internal damage.
- If your bicycle has a fault, the battery should be disconnected from the bicycle.

Keep in mind that your bike provides less support when it’s cold (0ºC and less) and the battery will discharge faster. Charging also takes more time at lower temperatures.

Every battery discharges automatically over time. This process is called self-discharge. A battery that is empty and not charged, will self-discharge and will be deep discharged. The battery can be permanently damaged during this process. In case of deep discharge, the warranty will be void.

Please note that any battery will wear over time. The wearing process of the battery is inevitable and depends on several factors, such as usage, number of charge cycles and the ambient temperature. Even if the battery is not used, its capacity will decrease. A worn battery can still be used, but please bear in mind that its charge level may decrease.
Possible malfunctions

- The system does not turn on:
  1. Make sure that the battery is properly attached.
  2. Check the status of the battery. If it is empty, recharge the battery.
  3. If the above action does not help, contact your dealer.

- If the battery indicator LED lights on the display are flashing:
The motor may be overheated by continuous high load. For protection, the system will reduce the support.
  1. The system is in temperature-protection. You can continue cycling with reduced support.
  2. After cooling down, the normal support and indication will restore automatically.

- If the support LED lights on the display are flashing:
  This indicates motor failure. You will need to contact your dealer.

- If a red LED light on the charger starts flashing, remove the plug from the mains outlet and do not longer use the charger. In this case, contact your dealer.

Charger Safety Measures

- Only charge Van Raam Li-Ion batteries with the included charger. Only connect the charger to a suitable power point (220-240 Volt AC 50-60 Hz). If the charger is not being used, unplug it from the socket and take the plug out of the battery.

- The charger may only be used by people who have read the information in this user manual and are familiar with the proper use of the charger. Keep the charger out of reach of children; do not let them play with it.

- The charger has been designed for use in a dust-free, dry, and ventilated environment. Do not expose the charger to water, heat sources, and direct sunlight. Keep the charger clean and dry.

- Do not charge batteries that feel hot to the touch. The battery may not be hotter than room temperature for charging. Stop charging if the battery becomes abnormally hot (>40 °C). Please note! The charger may become hot during charging > 50 °C. First carefully feel if it is safe to touch the charger. This temperature can cause sensitivity or startle if it comes into contact with the skin.

- Do not use the charger if it is visibly damaged or modified. Do not repair the charger! Please contact Van Raam. Never open the charger yourself!
• While charging, please monitor the charger and the battery. Once the battery is full, remove the plug from the socket and the plug out of the battery.

**Van Raam e-bike app**

The Van Raam bicycle app is a free smartphone app that you can use while cycling on your electric Van Raam bicycle.

**What can you do with the Van Raam e-bike app?**

It depends on the type of battery you have; a battery without a yellow GPS sticker or a battery with a yellow GPS sticker.

**I have a battery without a yellow GPS sticker**

- App can be used as a luxury bicycle computer
- Change bike settings
- Send SOS messages with GPS location to a number of your choice
- View cycled routes
- View information about the bike

**I have a battery with a yellow GPS sticker**

If you have a battery with yellow GPS sticker, then the above functions are also possible. In addition, some functions are added, namely:

- Pairing battery
- View battery data
- Receive battery advice
- Receive push notifications
How does the Van Raam e-bike app work?

With the Van Raam e-bike app, a connection can be made with the display via Bluetooth connection. As soon as the display is ready to connect to the smartphone, the on/off button will briefly turn blue.

This app can be used as a luxury bicycle computer for Van Raam bicycles with pedal assistance and also contains many other extra functionalities. The dashboard on the app shows the current speed, total distance, trip meter, battery capacity and power consumption during the bike ride. For more cycling data, there is a details screen including average speed, maximum speed, total distance, power, battery voltage, pedaling power and pedaling frequency.

The Van Raam e-bike app can be downloaded free of charge from the Google Play Store or Apple App Store.

For more information about the Van Raam e-bike app, you can visit the Van Raam website: www.vanraam.com.
Accessories

Depending on your order, you can use the accessories as described below. Extra accessories are available at your dealer.

**Speed hub co-driver (without gears)**
The main driver can adjust the co-biking of the co-driver with the speed hub. There are three positions:

1. The pedals of the co-driver move independently of the pedals of the main driver. The pedals move free and the co-driver cannot cycle.
2. The pedals of the co-driver move independently from the pedals of the main driver. The co-driver can cycle also.
3. The pedals of the co-driver are moving together with the pedals of the main driver. The co-driver has to cycle also.

**Speed hub co-driver (with eight gears)**
The main driver can adjust the co-biking of the co-driver with the speed hub. There are three positions:

1. The pedals of the co-driver are moving together with the pedals of the main driver. The co-driver has to cycle also.
2. The pedals of the co-driver move independently of the pedals of the main driver. The pedals move free and the co-driver cannot cycle.
3. The pedals of the co-driver move independently from the pedals of the main driver. The co-driver can cycle also.

Before cycling, set the speed hub in the desired position. When you want to cycle in another position, first stop the bike.
**Crank shortener**

The crank shortener is fitted to the crank, as illustrated. The pedal can then be fitted into the crank shortener at two positions.

With the screw [A] the crank shortener should be aligned with the crank.

**Foot support**

When using the foot support you can fix your foot by sliding the two straps [A] in the quick releases [B].

The quick release can be unlocked by pulling the lip to the rear. Now the strap can be pulled out.

You can cut the straps to size. The strap should retain a length of at least five centimetres.

The position of the foot support on the pedal is adjustable in length. This allows you to pedal with the ball of your foot for better thrust.

1. Slightly loosen the four nuts with a socket wrench.
2. Slide the plate included the foot support forwards or backwards into the desired position. Then tighten the nuts again.
The foot support is also adjustable in width. Only the outer half of the foot support can be extended.

1. Slightly loosen the two screws with an Allen key.
2. Slide the adjustable half of the foot support to the desired position. Then tighten the screws again.

With the axel pedal extender the foot support can be extend further.

The small foot support (Fix20) is suitable for shoe sizes 22 up to size 36. The width of the range of this foot support is min. 6,5 cm to max. 9 cm. The large foot support (Fix25) is suitable from shoe size 37 up to size 48. The width of the range of this foot support is min. 8,5 cm to max. 13 cm.

The foot support returns to its neutral position when it is not used. The neutral position can be altered by shifting the balancing block.

1. Slightly loosen the two screws with a socket wrench.
2. Slide the balancing block to the desired position. Then tighten the screws again.
**Lower Leg Fixation**

With the optional lower leg fixation, you can secure your lower leg. In order to set up the lower leg fixation:

1. Loosen the bolt [A] several turns using a nut spanner. Adjust the height of the lower leg fixation to the lower leg of the rider. Now tighten the bolt again.
2. Loosen the two nuts [B] several turns. The angle of the leg cup can now be adjusted. Rotate the leg cup in the correct position and retighten the nuts.
3. Use the Velcro to secure the lower leg.
**Flashing light system**

To use the flashing lights press the switch [A] to the left or right.

If you want to switch off the flashing light system, put the switch in the middle position.

The lights work on a battery.

To replace the batteries, turn the screw on the cap and take the orange cap [B] away. Then remove the PCB [C] from the holder. You can now replace the battery [D].

This is a 3-volt lithium battery, CR123A.

* Batteries cause environmental pollution. Follow the local regulations during disposal.*
Rotating seat
To rotate the seat:

1. Pull the handle to the front and rotate the seat. The seat locks itself.
2. Pull the handle again to rotate the seat back. The seat locks itself again.

OR

1. Pull the handle on the side of the chair backwards and turn the seat. The seat locks automatically.
2. Pull the handle on the side of the chair backwards and turn the seat to its normal position. The seat locks automatically.

Lap belt of the co-driver
Wrap the belt around the body and buckle it. Push the red button to unfasten the belt again.

Armrests
To get on the scooter bike easily, the armrest can be switched upwards. Once seated, you can bring down the armrest again.

The armrests are suitable to rest the arms. Do not use them when getting up the chair.

Take care that fingers and limbs do not get caught in between while folding the armrest!
**Swivelling footrest**
The footrest can be folded away under the seat.

⚠️ Ensure that the footrest falls into place and locks firmly!

**Comfort seat and children-comfort seat**
Depending on your order, the comfort seat is mounted on the bike frame or on the child-seat adapter.

To adjust the position of the seat correctly, the driver puts a foot on the pedals at the furthest position. Adjust the position in such a way that the leg is stretched but still relaxed.

To adjust the seat on the bike frame:

1. Pull the handle up.
2. Move the seat to the required position and release the handle.
To adjust the seat on the adapter:

1. Slightly loosen the grip handle.
2. Bring the seat in the required position.
3. Tighten the grip handle again.

**Position backrest comfort seat**
The backrest can be adjusted to the desired position. To do this:

1. Loosen the nut slightly.
2. Put the backrest in the desired position.
3. Tighten the nut again.

**Position backrest comfort seat**
(only seat on child-seat adapter)
The backrest can be adjusted to the desired position. To do this:

1. Slightly loosen the screw with an Allen key.
2. Put the backrest in the desired position and then tighten the screw again.
**Firmness backrest comfort seat**
To adjust the backrest to a looser or tighter position:

1. Open the straps by loosening the Velcro.
2. Tighten the straps or loosen them.
3. Fasten the Velcro again.

**Wheelchair carrier**
To attach the wheelchair on the back of the bike:

1. Place the wheelchair on the supports.
2. Wrap the belts around the tires and then through the buckle. Next, tighten the belts thoroughly.

Loosen the screws with an Allen key to adjust the supports.

Loosen the screws with an Allen key to remove the rack. When loosened, the rods can be pulled out of the bike frame.

⚠️ Transporting a walking frame is also possible. Please ask your dealer about the possibilities.

Maintenance and adjustments to be done by owner

Below you can find the instructions for maintenance and adjustments that you can do yourself on a regular basis, which will keep your tricycle in top condition.

Cleaning

The frame of the tricycle can be cleaned with a damp cloth. For areas that are dirtier you can use a mild detergent.

The wheels can be cleaned with a moist brush with plastic hairs (not a wire brush!).

The grips, seats and upholstery of the seat and back can be cleaned with a damp cloth and mild detergent.

⚠️ Do not use a pressure washer or a steam cleaner!
**The right lubricant**

The chain should be cleaned and maintained at regular intervals (every three months approximately). Only use special chain grease or Tevlon spray. This is the only way to make sure that the chain will run smoothly, will stay water resistant and will not rust.

1. Wipe the chain with a cloth.
2. Treat it with grease or spray.
3. Remove any excess lubricant with a rag.

Other parts should not be treated with a lubricant.

**Inspection of the tricycle**

It is recommended that the tricycle has a yearly inspection carried out by the dealer to claim warranty. Please use the form “Form service, maintenance, modifications an warranty claims” in the back of this manual. After 200 kilometres or after a period of two months the tricycle should be inspected.

In the event of technical trouble or faults, the tricycle should be taken to the dealer for repairs immediately.

The replacing of safety-related components (especially frame, brakes, lighting, handlebars, front fork and actuation) should be performed by the dealer.

If you still decide you want to replace components yourself, you are responsible for damage or harm due to incorrectly fitted components. Only use original Van Raam spare parts, which you can buy at your dealer. If requested the dealer will make the necessary information on repair and maintenance available.
**Repairs and maintenance to be done by dealer**

Check the brakes, the rims, lighting, the chain tension and the spokes. Also check the tyre tread depth. This should be at least one millimetre. Worn out tyres or possible faulty parts should be replaced. Also check the parking brake. With the parking brake pulled up, the tricycle should not ride away with the cyclist.

**Checking the rim**

Due to the combined action of the brake and the rims, not only the brake lining but also the condition of the rim is important. For this reason the rim should be checked at regular intervals, for example when you inflate the tyres. The presence of fine cracks in the spoke punches or deformation of the rim when there is higher air pressure, indicate more serious wear and tear. In that case the rim should be replaced, because it can lead to loss of brake function or even a crack in the rim, which can lead to all kinds of dangerous consequences.

Repairs, maintenance and modifications should only be performed with original Van Raam parts.
**Adjustments to be done by dealer**

**The correct tension of the chain**
There are three chains on the tricycle. The chain should not be too tight. It should hang loose. Without effort you should be able to move the chain up and down, half a centimetre approximately.

To keep the tension of the central chain correct, a special tensioning wheel is fitted by the back axis of the tricycle, as an integrated chain tensioner. To adjust the tension of the chain:

1. Slightly loosen the screw. Hold the nut at the back tight with a socket wrench to stop the screw from slipping.
2. Shift the tensioning wheel in such a way that the chain hangs loose, as described above.
3. Tighten the screw again.

To keep the tension of the two chains at the front correct, you can adjust the special tension wheels by the pedal axes. To do this:

1. Slightly loosen the screw. Hold the nut at the back tight with a socket wrench to stop the screw from slipping.
2. Shift the tensioning wheel in such a way that the chain hangs loose, as described above.
3. Tighten the screw again.
**Disposal**

If you want to dispose your tricycle, contact your dealer. You can also contact the local waste disposal company. They will dispose the tricycle according to the regulations of your town.

**Recycling the Battery**

If your battery is defective or if you are no longer using it, you must have it recycled. Please contact your dealer. They are responsible for complying with the recycling obligation. Ask them about the conditions or view the rules regarding recycling in your place of residence/country.

**Handover/sale to a new owner**

When you hand over your tricycle to a new owner it is important that you also hand over all necessary technical documentation and spare keys, so that the new owner can use the tricycle safely.

**Guarantee**

The guarantee is valid for all faults in the product, which are proven to be caused by material or manufacturing error.

We give a guarantee of five years on the frame and the front fork. For all accessories and other parts (except wear parts) we provide a two year guarantee, as legally regulated. The guarantee only applies for normal use and maintenance of the tricycle, as described in this manual.

**Beware!**

The guarantee as well as the product liability in general expires if the instructions stated in this manual are not followed. This is also the case if unauthorized maintenance is carried out or if technical changes or additions are made with non-original Van Raam parts without permission of Van Raam. The original CE certification will become null-and-void if modifications are done by third parties. The absence of the certification can lead to problems in insuring your bike, and for any loss or incurred.
Frame number

The frame number is printed on the sticker. This sticker is located on the frame, see the image below.

Example sticker:

Position of sticker:

- On the side of the seat tube
Maintenance recommendation

A Van Raam bike often is subject to extensive use and must perform in all weather conditions. By correctly maintaining the bike, the lifecycle can be extended greatly. This maintenance can be done by a Van Raam dealer. In most cases, you can do the monthly and annual inspection yourself.

</table>

* This is advised to extend your bike’s lifecycle. You can also have this done by your dealer.

Monthly inspection
15 minutes
Among them:
- Check and inflate the tyres
- Check the chain tension and grease if needed
- Tighten bolts/nuts where needed
- Check all lights
- Check the brakes
- Check all rotating parts and grease if needed
- Clean the bike

Annual inspection
60 minutes
Among them:
- Check and touch up the paintwork
- Check the wheels for any buckling
- Check the spoke tension
- Check the steering ball joints
- Check all lights
- Check the saddle clamp
- Check the placement of all electric components (E-Bikes only)
### 1st Service moment

15-30 minutes

Among them:

- Check tyres and inflate
- Check the spoke tension
- Check the chain tension and grease
- Tighten any bolts and nuts if needed
- Check all brake cables and brake calipers
- Check the gears
- Check and grease all rotating parts
- Check all lights
- Clean the bike

### 2nd Service moment

30-90 minutes

Among them: All points from service moment 1, and:

- Inspection of the pedals and bottom bracket
- Grease and tighten the lock
- Grease and tighten the steering stem
- Check the steering ball joints
- Run all tests in the dealer tool (E-Bike)

### 3rd Service moment

60-120 minutes

Among them: All points from service moment 1, 2, and:

- Inspection of the paintwork
- Inspection of the frame/front fork
- Inspection of the seat cushions
- Inspect the functioning and sound of the motor/gear hub
- check reflectors for any damage
- Check all electric components on their placement (E-Bike)
- Run all tests in the dealer tool (E-Bike)

Delivery and service form

Congratulations on your purchase of your Van Raam tricycle. This bike is produced with utmost care. To guarantee the quality as much as possible Van Raam produces the cycles according to the ISO 9001:2015 quality standards. Van Raam has been certified by DNV GL Business Assurance BV.

You will especially enjoy your Van Raam bike when the bike is adjusted to your specifications and when the instructions in the user manual are followed. Pay special attention on the service intervals who specified in the manual of the bike.

To claim warranty and service you should always fill out this form, at least at delivery and service. This signed form declares that the end user had an instruction on the operation of the tricycle, that the tricycle is adjusted to the specifications of the end user and that the user manual is received.

Fill out when the tricycle is delivered
